Subject: FW: PM TES file

Importance: High

Dear Bettie

my programmer has a few questions about the TES data file:...

The following ID's (17,31,33,54,61 and 65) had one or more visits with no NUMCIGS. Can you find out what these values were? if not, should we just use the last NUMCIGS value and carry it forward?

For several patients, there is just the SCR and ENR Visit information and nothing further. Can we conclude that these were dropouts?

thank you  
Diane
